

AUTOMATED INTELLIGENCE REPORTING

Every morning, the day's risks are already on your desk.

A one-page brief, assembled overnight from the tools you already use.
Ninety seconds to read. No dashboards. No digging.

WHAT IT IS

An intelligence brief that assembles itself

Every weekday before you're up, one page lands in your inbox: what's slipping, what changed overnight, and what needs a decision today. It reads across the tools you already use — email, calendar, CRM, documents — reconciles them against your open commitments, and ranks what's left by risk. You read it in ninety seconds and start the day already knowing where to push.

THE PROBLEM IT SOLVES

Why it matters

The thing that bites us is never the loud one. It's the deadline nobody was tracking, the reply that never came, the commitment that quietly went stale. Dashboards make you go looking. This does the looking for you — and surfaces only what changed or what's at risk. Nothing to open. Nothing to maintain. It comes to you.

The posture is practitioner, not theorist. It reports what happened, why it matters, and what's next — the way an operator briefs a peer, not the way a dashboard dumps data.

HOW IT WORKS

From your tools to your inbox, overnight

- 1 Reads your sources overnight**
Email, calendar, CRM, documents, and more — whatever you choose to connect.

- 2 Reconciles your open commitments**
Every promise you made or are owed, tracked in a running ledger that carries over day to day.

- 3 Ranks everything by risk**
Due dates, silence, and stale loops rise to the top. The loud-but-harmless drops down.

- 4 Lands as one page**
Ordered by what needs you first — not by which inbox it came from.

NO SPIN

Why you can trust it

It doesn't editorialize. Every line traces to a real message, meeting, or file. When the evidence isn't there, it says so — "unconfirmed," not a guess dressed up as fact. It flags its own blind spots instead of papering over them. Commitments close only on hard evidence — a sent message, a signed document, a meeting that happened — never on a read receipt. You're reading signal, not spin.

WHAT IT LOOKS LIKE

A representative brief

Illustrative · details redacted for sharing · a real brief names the specific deliverable, person, and source behind every line

Two decisions need you today; one deliverable is due in 48 hours.

Sources: Email, Calendar, CRM, Documents

AT RISK

- A client assessment deliverable is due Friday — drafting is underway, but it hasn't gone out. Confirm the timeline at today's check-in.
- A supplier shortlist you promised a guru is three days idle. Send it, or reset the date.

TODAY

- **Morning** — discovery call with a prospective enterprise account. They asked for scope; have the one-pager open.
- **Afternoon** — working session on an active engagement. One approval is still outstanding.

WHILE YOU WEREN'T LOOKING

- A partner replied after hours accepting next steps — it advances the moment it's countersigned.
- Overnight inbound: a new enterprise inquiry in the contact-center space.

FYI

- Two meetings overlap Thursday afternoon.

THE MEMORY UNDERNEATH

The commitments ledger

Under the brief sits a running ledger of every open loop — what you owe, what you're waiting on, and the calls only you can make. Items close only on hard evidence, and nothing is ever silently dropped: a loop that goes quiet for a week gets flagged "kill or commit," not forgotten. The brief is the daily view; the ledger is the memory that makes tomorrow's brief smarter than today's.

OPEN · live and owed

WAITING · on someone else

AT RISK · due soon or gone stale

CLOSED · with evidence on file

START SMALL

How it adapts

Connect only what you want. Email and calendar alone produce a useful brief in minutes; add CRM, documents, or chat and it widens on its own. The format stays one page, always ordered by what's most at risk. You never open a dashboard — it arrives before you're up.

WORKING AS A TEAM

Shared projects: one team, one workspace

The daily brief is personal. Shared projects are how the team works as one. A project is a single workspace — shared context, shared files, shared instructions — that everyone on it draws from. Set it up once and every person's work starts from the same playbook: on-brand, consistent, and current, instead of each of us rebuilding it from scratch.

IN PLAY NOW

CTG SEO & LinkedIn Outreach — already shared across the team. One workspace for driving new prospects to cloudtechgurus.com and growing ICP sales. One place, one pipeline, everyone pulling the same direction.

OPTIONAL, BY TOPIC

How we roll it out

Short, optional workshops — one topic each, every couple of weeks, labeled so you attend only what's useful. First up: getting set up on Claude Desktop. Then we go into the shared project together and put it to work.

Start with one 30-minute session

Claude Desktop, optional, on your own machine — then we run the shared project as a team. The rest of the series is yours to pick.

WHAT'S NEXT

One more thing

What's in this report is the visible layer. There's more running underneath — Claude Desktop is the front door to it, not the whole house. We'll open that up together once the basics are second nature. For now: get comfortable with the tool. The rest comes next.

We didn't study contact centers. We ran them.
